

# ABOUT PRO GATE

Pro Gate is BMX-meets-real-deal-engineering. All our products start with rider, track-operator and race-promoter input. Next, professional engineers who create machines for major manufacturing companies get to work designing and building.

Then it's back to the track, where prototypes are tested, and the fine-tuning that brings together those two very-different worlds takes place.

The end result is a family of products that BMXers around the world can count on, year in and year out. A product line that meets, or exceeds, global standards for safety, operability and durability.

Those who appreciate great product design know the level of innovation and care by which Pro Gate products make their way to market. Those who ride know, "it just works...every time."

## About The Crescent-4

Whether installed on a permanent starting hill, or used as a portable system for a series promoter, the Crescent-4 is the answer to safe and consistent heat starts every time. The curved-face design prevents rider injuries caused by hands and feet being where they shouldn't be when the gate drops; and the legendary Pro Gate workmanship ensures you won't get caught with your gate down.

On the Cover: A detail of the rider-side of the Pro Gate Crescent-4, including some of the underside structure.

# CRESCENT-4

## PROFESSIONAL STARTING SYSTEM

When competition is at its best, the senses of the athletes in the gate are at their highest. Sometimes, the anticipation to “go” is too much, or something goes wrong at the last second, and a rider ends up over-the-gate. With Pro Gate Crescent, an accidental trip over the bars may not be pretty, but danger is removed from the equation.

The “Crescent” design adds an integrated curved face to the drop section of the gate—leaving no opportunity for hands or feet to accidentally find themselves in the wrong place at the wrong time. Crescent can be installed into a pre-fabricated pit on your starting hill, or as a semi-permanent unit that includes the rider launch and drop sections.

Our eight-rider Crescent is the official starting gate for the UCI BMX World Challenge classes. After seeing Crescent in action at BMX tracks around the world, 4X promoters and training facility managers asked us to make a four-rider configuration available. Always happy to oblige.
